

Environmental Policy

Wiltan Magnetic Components is the UK's leading manufacturer and supplier of strip wound cores in electrical steels, both cut and uncut, and cut laminations for use in the transformer and associated industries. The quality and manufacturing systems are constantly being reviewed, resulting in ongoing improvements. Protection of the environment is inherent in our day-to-day manufacturing activities and is a fundamental part of our business ethics. Accordingly, we have developed an Environmental Management System that is based on "The Green Dragon Award" and "ISO 14001. Our system is incorporated into all company operations, thereby ensuring we:

- **Manage and minimise environmental risks identified in our manufacturing operations**
- **Minimize all aspects of waste, in all areas of the business, through continuous monitoring of people, machine, materials, utilities and non-renewable energy.**
- **Maintain our 100% regulatory compliance record.**
- **Promote the recycling of any waste produced.**
- **Assess the environmental performance of key suppliers and co-operate with suppliers and customers to achieve higher environmental standards.**
- **Minimize energy usage through the monitoring and implementation of control systems that would reduce the company's use of non-renewable energy.**
- **Support the aims of Torfaen council in improving and maintaining an environmentally sound infrastructure to the locality through the prevention of pollution.**

We audit our operations for compliance with this policy and measure progress made in our quest for continuous environmental improvement.
